# COOPERA

**COOPERA**

— Be anywhere,

work everywhere

# The Enterprise Platform Built to Orchestrate Content, Processes, and AI

**Coopera** is a **Business Orchestration and Automation Technology (BOAT)** platform that unifies enterprise content and process automation with embedded AI. Designed for speed, scale, and security, Coopera enables organizations to centralize documents, automate complex workflows, and gain actionable insights — all without writing code.
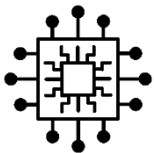

**1 |** *BOAT + ECM*

First-of-its-kind platform that combines Business Orchestration & Automation Technology with Enterprise Content Management.
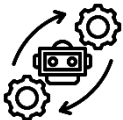

**2 |** *No-Code Development*

Build and adapt workflows visually — minimal developer dependency.

**3 |** *AI Orchestration*

Integrates generative and analytic AI to extract, classify, summarize and predict from content.

**4 |** *RPA & Automation*

Built-in robotic process automation for repetitive task elimination.

**5 |** *Enterprise Integration*

Built-in robotic process automation for repetitive task elimination.

**6 |** *Security & Compliance*

Role-based access, encryption, audit trails and lifecycle controls.

# CORE CAPABILITIES

- **Record Management**
  Organize and categorize digital records across the organization with lifecycles, metadata sets, and information governance.
- **Document Management**
  Manage documents, images, and multimedia in secure libraries with collaboration features like check-in/out, versioning, and feeds.
- **Email Management**
  Centralize enterprise mailboxes and automate message processing, routing, and composition.
- **Case Management**
  Create and manage digital cases with rules-based content aggregation, real-time indicators, and AI-powered verification.

- **Project Management**
  Plan, track, and deliver projects with boards, tasks, and automated scheduling of dependencies and deadlines.
- **Task Management**
  Define approval flows, assign responsibilities, and monitor progress to completion using agile-style boards.
- **Process Automation**
  Design and orchestrate end-to-end processes with no-code tools and AI decision automation.
- **Robotic Process Automation (RPA)**
  Use AI-powered bots to eliminate repetitive manual work, boost productivity, and reduce errors.
- **Content Analysis**
  Turn content into insights with analytics dashboards that monitor performance, identify trends, and guide data-driven decisions.
