CUSTOMER NEEDS

- Automate certificate deployment in Kubernetes clusters and Citrix FAS environments.
- Assess existing certificate deployments across hybrid platforms.
- Support multiple PKIs including OpenTrust, EJBCA, and Entrust.

Solution

- Integration of certificate management with Kubernetes cert-manager and Citrix FAS.
- Discovery and monitoring tools implemented for better asset visibility.
- Seamless management of user and server certificates.

Outcomes & Benefits

- Improved collaboration between DevOps and SecOps through automation.
- CISO regained visibility and control over certificate assets.
- Reduced outages in mission-critical financial systems.

Future Outlook

- Readiness for short-lived certificates and PQC adoption in cloud-native infrastructures.
- Compliance with GCC central bank regulations and global standards.
